

I am writing to express my support for a wonderful new technology: satellite radio. It is an enormous improvement over local radio AM and FM broadcasting. And I am very willing to pay a fee to listen to commercial free broadcasting. My local broadcasting options pale in comparrison to the more than 100 stations on satellite. I still have the ability to tune in all the local stations. Do not allow this new tecgnology to be limited by old one. Keep a level playing field and let the market decide who should thrive and who should not.
